

**IDPs** 2,849,083<sup>1</sup>  
Total IDPs in North-West Syria

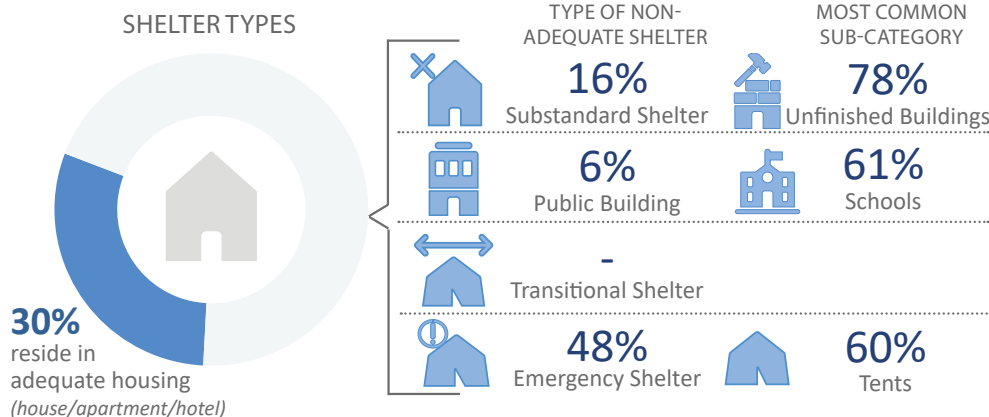

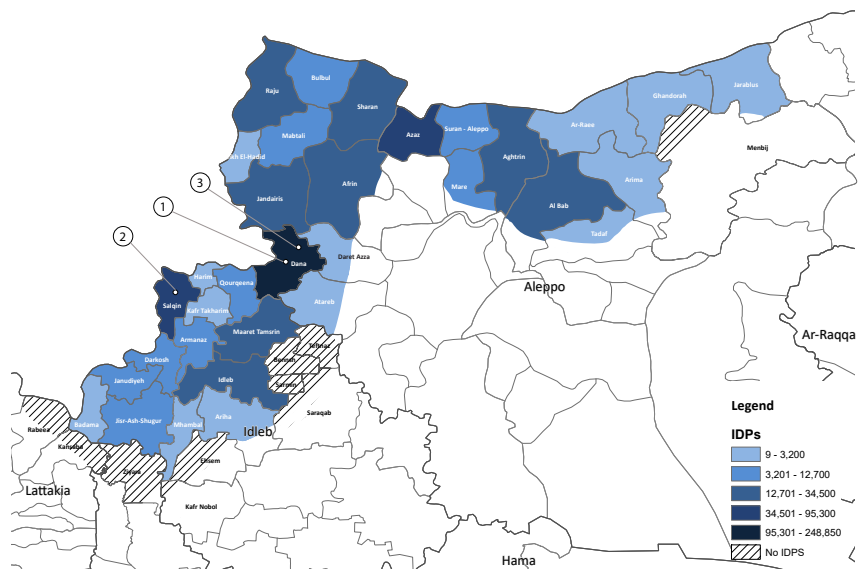

Internally Displaced Persons (IDPs) are individuals who have been forced to flee their location of origin to another location within Syria for at least one month. They are either displaced from one location in Syria to another, or displaced within Syria after having had returned from abroad.<sup>2</sup>

**TOP 3 COMMUNITIES OF ARRIVAL**

Community	Sub-District	IDPs
Dana (Dana)	Dana	71,588
Salqin	Salqin	50,328
Sarmada	Dana	47,802

**Returns** <sup>7</sup> 2,203  
Total returns in NWS in 2020

Returns are individuals who have returned to their place of origin for at least one month after having previously fled their location of origin for at least one month.<sup>6</sup>

**RETURNEES FROM WITHIN SYRIA**

Returns from within the Syria are a subset of returns in NWS who have returned to their place of origin for at least a month after having previously fled to another location within Syria for at least a month.

**RETURNEES FROM ABROAD**

Returns from abroad returned to their place of origin in NWS for at least a month after having previously fled to another location outside of Syrian borders for at least a month. Of note, HNAP has no means of verifying the reported country of displacement or the status held by returns when in these countries.

POPULATION HIGHLIGHTS

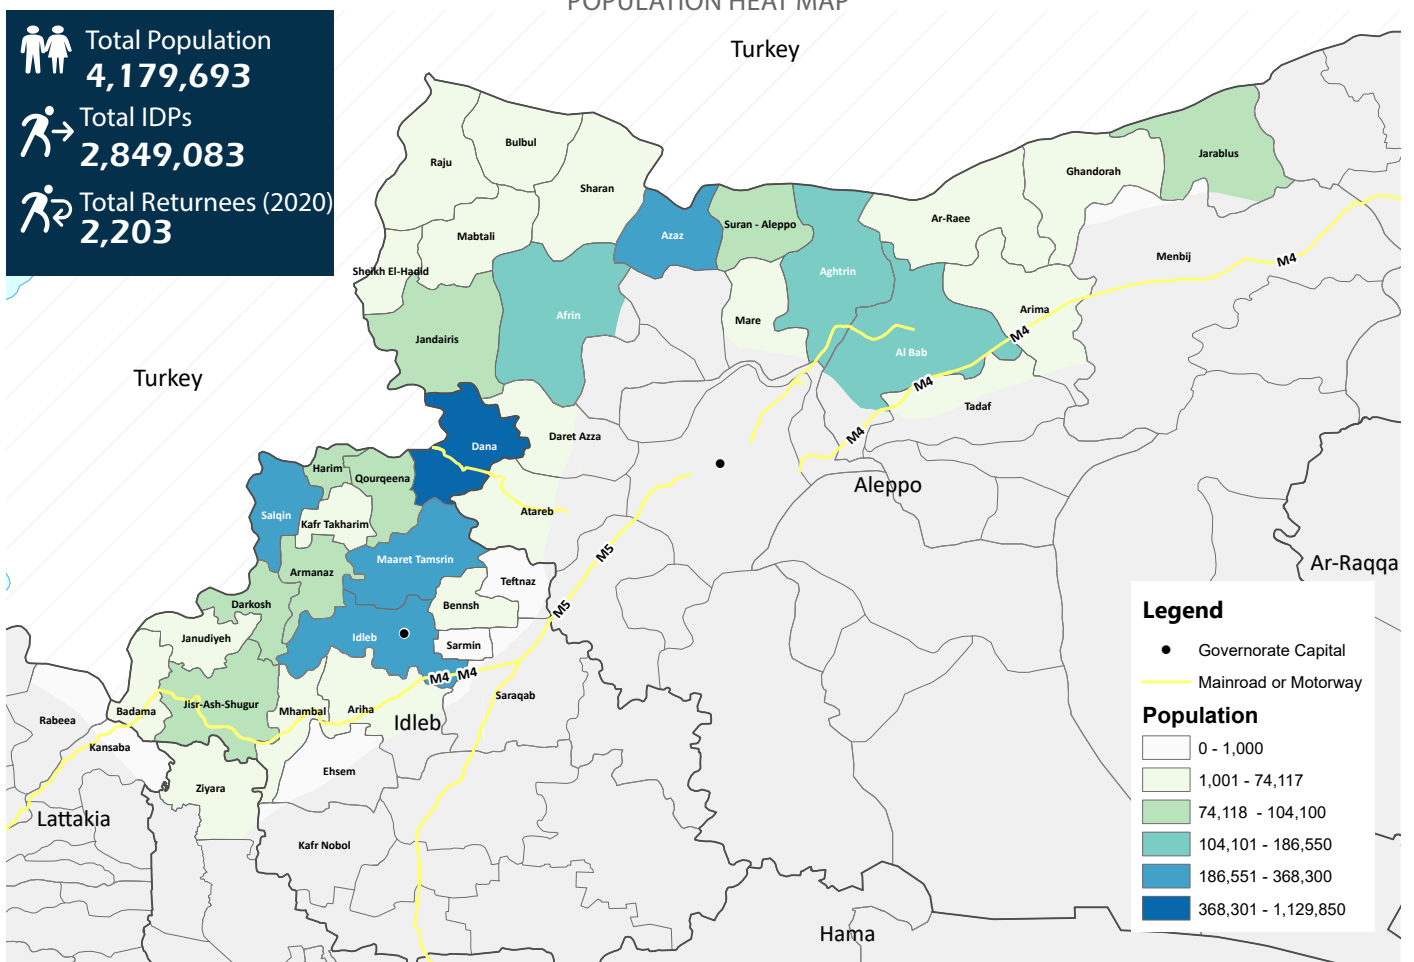

MONTHLY IDP HIGHLIGHTS in NWS

As military operations intensified over the course of February 2020, an extremely significant 742,109 persons were displaced, which marks a 117 percent increase from January 2020 and a 310 percent increase from December 2019. Airstrikes, shelling, and ground operations in Idleb and Aleppo have continued to push increased numbers of IDPs north and north-west. Dana sub-district has reported the highest levels of arrivals (34 percent), followed by Salqin (13 percent), and A'zaz (11 percent). In November 2019, prior to conflict escalation, there was a reported number of 2,123,198 IDPs in north-west Syria- a number which has since increased to 2,894,083.

57 percent of IDPs in north-west Syria are displaced in the 8 sub-districts between (and including) Idleb city and Dana in north-west Idleb; 24 percent are displaced in northern Aleppo along the Turkish border, from Raju to Jarablus, while 4 percent are displaced in Afrin.

Shelter conditions for IDPs displaced in February are of high concern. 48 percent are housed in emergency shelter (mostly in tents) and 16 percent are in sub-standard shelters (mostly in unfinished or abandoned buildings).

Priority Needs

The MNM looks at the priority needs in the last 30 days across north-west Syria. Information and subsequent color coding is determined according to the percentage of the host community, IDPs and returnees who report a particular service/sector as needed in each community. Community focal points are asked the extent to which each service sector is needed for each population category. For more information on the priority needs, please consult the dataset.

## BACKGROUND AND METHODOLOGY

### WHAT IS HNAP?

The Humanitarian Needs Assessment Programme (HNAP) for the Syrian Arab Republic is a joint UN assessment initiative, which tracks displacement and return movements, conducts sector and multi-sector assessments, and monitors humanitarian needs inside Syria. HNAP is implemented through local Syrian NGOs, with technical support from UN agencies. Information is collected across all communities in Syria through face-to-face consultations and direct field observations.

### MOBILITY AND NEEDS MONITORING

The Mobility and Needs Monitoring (MNM) in NWS factsheet is published every month in order to enable humanitarian partners to deliver evidence-based humanitarian support to the most in-need communities in north-west Syria. Through the MNM, HNAP provides updated monthly information on crucial issues, such as push and pull factors, times and frequency of displacement, shelter types, and priority needs in the last 30 days all pertaining to the two primary population categories, namely:

- Internally Displaced Persons (IDPs) - who are further subdivided into categories of regular internal displacement and internal displacement post-return;
- Returnees - who are further subdivided into returnees from abroad or returnees from other locations within Syria;

### METHODOLOGY

In order to fulfil its objectives, the MNM in NWS utilises a community focal point methodology. Community focal points are selected based on the quality/reliability of information provided, their knowledge and expertise of the needs and current situation of target population groups, and their representativeness of the target population groups. For the purpose of quality control, five factors concerning the reliability of information provided by community focal points are taken into account, which together constitute the assurance level:

- Community focal point is involved in the registration of IDPs and returnees;
- Community focal point has a list of the IDPs and returnees;
- Community focal point is involved in humanitarian response operations;
- Three community focal points separately interviewed and provided their response with less than 3% discrepancy;
- Information provided by community focal point is supported by enumerator's observations.

Significant highlights regarding the overall composition of enumerators, community focal points, coverage, and assurance levels are as follows:

The HNAP assessment of the communities is carried out by taking the list of communities on existing datasets (p-code), used by OCHA and humanitarian agencies in the Syrian Arab Republic.

### ASSURANCE LEVEL

### FOOTNOTES AND DISCLAIMERS

<sup>1</sup>The information in this product is based on estimates/available data based on key informant methodology and is intended to serve as one source of data for further triangulation with other sources by the IDP Task Force and Population Task Force.

<sup>2</sup> Figures on the origin of IDPs should not be taken as accurate breakdowns by timeline, rather, they are calculated based upon community focal point approximations on majority numbers in an assessed location.

<sup>3</sup> NWS figures include temporary displacement (individuals who were displaced for a minimum of 5 days), please note these figures differ from HNAP and the CCCM Cluster's IDP Snapshots, regarding ongoing hostilities in NWS, which take into account all displaced individuals, regardless of time spent in displacement, and estimate that over 298k were displaced in NWS during the month of December.

<sup>4</sup> The percentages shown here only include reasons rated as "very important".

<sup>5</sup> Basic services refer to municipality related issues, such as access to electricity and fuel, rubbish collection and road-works.

<sup>6</sup> Figures on the last place of displacement of IDPs and returnees should not be taken as accurate breakdowns by timeline. They are calculated based upon community focal points' approximations on majority numbers in an assessed location. Figures for IDPs from abroad are based on KI reports inside Syria and not in hosting countries.

<sup>7</sup> The definition of returnees is not related to the criteria of return in terms of safety and dignity, nor with any durable solutions defined strategy. Refugee return figures are collected in return areas inside Syria only and not in hosting countries. For further queries on refugee returns please refer to UNHCR
